Year 8

Algebra

LESSON 1: Mind readers

Puzzling it out Level 3

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	2 8	10	
Halve your answer	37	14	5	
Subtract 28	9	-24	-1212-14	
Multiply your answer by 4	36	-76	<i>144-5</i> 6	
• Add 84	120	8	<i>614.61</i> 2/28	
Halve your answer	60	14	14	Final number

Complete this sentence:

The final number in this puzzle will always be _____

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
•	= C3 * 8
•	= C4 / 2
•	= C5 – 16
•	= C6 / 4
•	= C7 – C2

Complete this sentence:

The final number in this puzzle will always be _____

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28	ar Ic)
Halve your answer	37	14	\$ J	
Subtract 28	9	-14	- 2 <u>%</u>	3
Multiply your answer by 4	36	-26	-92	
• Add 84	120	28	-8	
Halve your answer	60	14	-4	Final number

Complete this sentence:

The final number in this puzzle will always be $rac{\omega_{2}}{2}$.

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
•	= C3 * 8
•	= C4 / 2
•	= C5 – 16
•	= C6 / 4
•	= C7 – C2

Complete this sentence:

The final number in this puzzle will always be _____

Explain how you know.

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28		
Halve your answer	75	14		
Subtract 28	m@9	-) 4		
Multiply your answer by 4	36			-
• Add 84	120			
Halve your answer	60			Final number

Complete this sentence:

The final number in this puzzle will always be _____

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
• X 8	= C3 * 8
• %2	= C4 / 2
• - 16	= C5 – 16
• # 6 4	= C6 / 4
• — original number.	= C7 – C2

Complete this sentence:

The final number in this puzzle will always be _____

Here are the instructions for a puzzle. Fill in the missing numbers.

	Think of a number:	60	14	-4	Start number C
	• Add 14	74	28	10	2(+)4
	Halve your answer	37	14	5	20+7
	Subtract 28	9	-14	-23	<i>J</i> C ~ 2. <i>9</i> €4(∝-21) 4(∝-21)H84 2(3⊂-10.\$744)
	Multiply your answer by 4	36	- 56	-92	4(20-21)+84
	• Add 84	140	28	-6	200 10.07142
	Halve your answer	70	14	`3	Final number
	plete this sentence: inal number in this puzzle will always be		14	217 377 -2.8	<u> </u>
Now	complete the instructions for this different	ent puzzl	e	0 1	140

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2	23
• Add 4	= C2 + 4	23
• Multiply by 8	= C3 * 8	23
· divide by 2	= C4 / 2	772
• Minus 16	= C5 – 16	
 divide by 4. minus co 	= C6 / 4	
• minus c2	= C7 – C2	

Complete this sentence: The final number in this puzzle will always be ______

Explain how you know.

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74			
Halve your answer	37			
Subtract 28	9			
Multiply your answer by 4	36			
• Add 84	120			
Halve your answer	60			Final number

The final number in this puzzle will always be the same as your start number. Complete this sentence:

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2	ع ١
• Add 4	= C2 + 4	65
· Multiply your answer by 8	= C3 * 8	4 8 4 0
• Divide your ensuer by 2	= C4 / 2	24 20
· subtract 16	= C5 – 16	84
· Divide your answerby 4	= C6 / 4	21
· Subtract your start number	= C7 – C2	0 0

Complete this sentence:

The final number in this puzzle will always be _____

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28	10	
Halve your answer	37	14	5	
Subtract 28	9	-14	-23	
Multiply your answer by 4	36	-56	-92	
• Add 84	12 ()	28	-8	
Halve your answer	66	14	-4	Final number

Complete this sentence:

The final number in this puzzle will always be _____

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
• X\$\$	= C3 * 8
• ÷2	= C4 / 2
• -16	= C5 – 16
• ÷4	= C6 / 4
· MM - What you started with	= C7 – C2

Complete this sentence:

The final number in this puzzle will always be _____

Explain how you know.

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28	10	
Halve your answer	37	14	5	
Subtract 28	٩	-14	-22	
Multiply your answer by 4	36	-56	-88	
• Add 84	120	248	WARD	
Halve your answer	60	14	-4	Final number
Complete this sentence: The final number in this puzzle will always be いばん	the	numb.	er	you Started

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
. the muttiply by 8	= C3 * 8
· & halve it	= C4 / 2
· Subtract 16	= C5 – 16
· Divide by 4	= C6 / 4
· Subtract 1	= C7 – C2

Complete this sentence:

The final number in this puzzle will always be _____

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	. 28	10	
Halve your answer	37	1214	5	
Subtract 28	9	-優4	-23	
Multiply your answer by 4	36	-56	-92	
• Add 84	120	28	- 8	
Halve your answer	60	14	-4	Final number

Complete this sentence:

Complete this sentence:	11 -			n	1-1-1	
The final number in this puzzle will always be	the	Same	as	the	157-	

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	$= C2 + 4_{5xg}$
• X S	= C3 * 8 40 +2
• ÷ ૨	= C4 / 2 20-16
• - 16	= C5 - 16 ₄₊₄
• ÷ 4	= C6 / 4
· - the number you started	= C7 - C2 ₋₃

Complete this sentence:

Explain how you know.

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28	10	
Halve your answer	37	14	5	
Subtract 28	59	-14	-23	
Multiply your answer by 4	€36	-56	-92	
• Add 84	1230	28	-8	
Halve your answer	6%	14	-4	Final number

Complete this sentence:

The final number in this puzzle will always be the same as your start

number

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
· Multiply by 8	= C3 * 8
· Divide by 2	= C4 / 2
· Subtract 16	= C5 – 16
· Divide by 4	= C6 / 4
· Subtrack your first number.	= C7 – C2

Complete this sentence:

zero The final number in this puzzle will always be

Here are the instructions for a puzzle. Fill in the missing numbers.

Think of a number:	60	14	-4	Start number
• Add 14	74	28	10	
Halve your answer	37	14	5	
Subtract 28	٩	-14	-23	
Multiply your answer by 4	36	-546	-92	
• Add 84	120	BAQ2 8	-8	
Halve your answer	60	4	-4	Final number

Complete this sentence: The final number in this puzzle will always be the number you started with

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
• multiply by 8	= C3 * 8
· divided by two	= C4 / 2
 Subtract 16 	= C5 – 16
· divide by 4	= C6 / 4
· subtract the number you started	= C7 – C2

Complete this sentence:

0. The final number in this puzzle will always be _

Explain how you know.

Here are the instructions for a puzzle. Fill in the missing numbers.

	Think of a number:	60	14	-4	Start number		
	• Add 14	74	28	16			
	Halve your answer	37	14	[.] 5			
	Subtract 28	9	-14	-23			
	Multiply your answer by 4	- 36	-56	-15:1492			
	• Add 84	120	28	-8			
	Halve your answer	60	14	-4	Final number		
Cor The	Complete this sentence: The final number in this puzzle will always be the number you studied						

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
• Multiply your answer by 8	= C3 * 8
• Divide your answerby 2	= C4 / 2
· Subtract 15	= C5 – 16
· Divide your answer by 4-	= C6 / 4
· Subtract the number you	= C7 – C2

Complete this sentence: The final number in this puzzle will always be The number you started

n n+4 with +4 Explain how you know. 8n+32 8n+16 2n+4 n+4

with

Here are the instructions for a puzzle. Fill in the missing numbers.

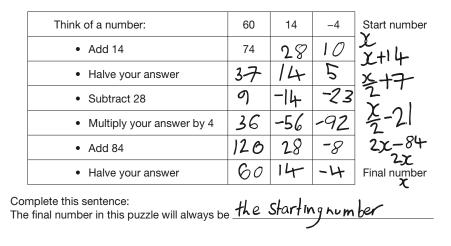

Think of a number:	60	14	-4	Start number	
• Add 14	74	28	10		
Halve your answer	37	14	5		
Subtract 28	q	-14	-23		
Multiply your answer by 4	36	-56	-92		
• Add 84	120	28	-8		
Halve your answer	60	14	-4	Final number	
Complete this sentence: The final number in this puzzle will always be the Same as the start number					
			num	ber	

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	This is cell C2
• Add 4	= C2 + 4
• times 8	= C3 * 8
• halfit	= C4 / 2
• # subtract 16	= C5 – 16
• ÷ by 4	= C6 / 4
• subtrad the starting number	= C7 – C2

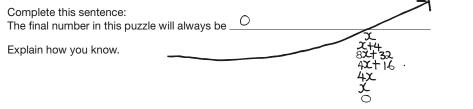

Complete this sentence: The final number in this puzzle will always be Explain how you know. n+4 8n+32 4n+16 4n n O

Here are the instructions for a puzzle. Fill in the missing numbers.

Now complete the instructions for this different puzzle. The first two rows are done for you.

Think of a number:	8	This is cell C2	X
• Add 4	12	= C2 + 4	x+4
· Multiply D	96	= C3 * 8	8x+32
· Divide by 2	48	= C4 / 2	 ۳۲+۱6

Year 8

Algebra

LESSON 2: What's the trick?

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n 5	Start number
Double it	10	
• Add 12	22	
Halve your answer	11	
Subtract the start number	6	Final number

What will the final number of the puzzle always be? _____

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n 5	Start number
Double it	NXY 10	
• Add 12	2×11+12, 22	
Halve your answer	340 + 6 11	
Subtract the start number	WV+6 6	Final number

What will the final number of the puzzle always be? 1+ the number You Sbort with.

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n 5	Start number
• ADD 9	n+9 14	
·TIMES 2 ADD 18	2n + 18 42	
• TIMES BY 2	²ⁿ 52	
. IT MLL BE YOUR ORIGINAL ANSWER +10	ⁿ 5	Final number

The algebra shows that the final number of this puzzle will always be *n*. Use words to explain what that means.

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number: 6	п	Start number
• 12	n + 9	
•30	2 <i>n</i> + 18	
<i>• اع</i>	2n	
• 6	п	Final number

The algebra shows that the final number of this puzzle will always be n. Use words to explain what that means.

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n	Start number
Double it	n*2	
• Add 12	n +12	
Halve your answer	n/2	
Subtract the start number	n-n	Final number

What will the final number of the puzzle always be?

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	п	Start number
Double it	nx2	
• Add 12	2n+12	
Halve your answer	2n+6	
Subtract the start number	12M 6	Final number

What will the final number of the puzzle always be? _____

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n	Start number
. add 9	<i>n</i> + 9	
· Multiply by 2	2 <i>n</i> + 18	
· Subtract 18	2n	
· Divide by 2	п	Final number

The algebra shows that the final number of this puzzle will always be *n*. Use words to explain what that means.

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	п	Start number
· add nine	<i>n</i> + 9	
· Double it	2 <i>n</i> + 18	
· Subtract 18	2n	
· Halve it	п	Final number

The algebra shows that the final number of this puzzle will always be n. Use words to explain what that means.

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n	Start number
Double it	2n	
• Add 12	2n +12	
Halve your answer	2n+12 ÷ 2	
Subtract the start number	\land	Final number

What will the final number of the puzzle always be? the same as the start number.

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n	Start number
• Ada 9	<i>n</i> + 9	
· Double your answer	2 <i>n</i> + 18	
 Subtract 18 	2 <i>n</i>	
· Halve your answer	п	Final number

The algebra shows that the final number of this puzzle will always be *n*. Use words to explain what that means.

The *n* version sheet 1 Level 5

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n	Start number
Double it	2n	
• Add 12	2n+12	
Halve your answer	n + 6	
Subtract the start number	6	Final number
What will the final number of the puzzle always be?	66	

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n	Start number
• Add 9	<i>n</i> + 9	
· Pouble your answer	2 <i>n</i> + 18	
· Subtract 18	2n	
 Subtract 18 Subtract the number you started with 	n	Final number

The algebra shows that the final number of this puzzle will always be *n*. Use words to explain what that means.

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n	Start number
Double it	20	
• Add 12	2n+12	
Halve your answer	nt6	
Subtract the start number	6	Final number

What will the final number of the puzzle always be? <u>6</u>

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	п	Start number
• Add 9	n + 9	
· Double your answer	2 <i>n</i> + 18	
· subtract 1.8	2 <i>n</i>	
· Halve your answer	n	Final number

The algebra shows that the final number of this puzzle will always be *n*. Use words to explain what that means. Shart Jumber

Use algebra to show how this puzzle works.

	The <i>n</i> version	
Think of a number:	n	Start number
• Add 6	-N+C	
Double your answer	n+6X2	
• Add 4	N+6X2+4	
Halve your answer	N+6X2+4+2	
Subtract the start number	N+6X2+4/2-N	Final number

Use algebra to show how this puzzle works.

	Т	he <i>n</i> versior	า	
Think of a number:	6	n	8	Start number
Add 6	12	n+6	14	
Double your answer	ŰĻ	2n+6	28	
• Add 4	Ż8	2n+10	32	
Halve your answer	14	11+10	16	
Subtract the start number	8	10	8	Final number
What will the final number of the puzzle always be?S				

What will the final number of the puzzle always be?

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n	Start number
· divide by 5	<u>n</u> 5	
• add 1	$\frac{n}{5}$ + 1	
· double your answer	2 <i>n</i> + 10	
· TAKeaway 10	2n	Final number

The algebra shows that the final number of this puzzle will always be 2n. Use words to explain what that means.

Here is a different puzzle. The algebra shows how the puzzle works. Complete the instructions.

	The <i>n</i> version	
Think of a number:	n	Start number
• # Pivide by 5	<u>n</u> 5	
• Add 1	$\frac{n}{5} + 1$	
• Double your answer Add 8	2 <i>n</i> + 10
