Wacky Races!

This is a racing track with a twist, you need to go backwards! The winner is the first player to negative 25.

Place your pieces on the start. Shuffle the cards and place them face down on the table. Each player is to pick a card at random. The player with the lowest number goes first. Replace the cards at the bottom of the pile. Move your piece to positive 10. To start you must draw a positive number from the pile. Subtract that number from positive 10 and move to your answer on the board. Repeat by drawing either a positive or negative number on each turn and subtracting it from the number on the board.

You must say the problem out loud on your turn e.g. $+2-1=+3$ and agree upon the answer with the other players. If not you must move 3 places towards the start from where you land!
