

Little Money Problems

► **You Need**

- 1 die
- 1 counter for each player
- A calculator
- Pencil and paper

► **Rules**

Write each player's name on sheets of paper and underneath it write \$10. You will add and subtract from this total during the game.

Take turns to roll the die and move your counter. If you land on a square with money in it, add the money to your total. End your turn there. If you land on a circle with money in it you subtract the money from your total and end your turn there. If you land on a blank square stay on that square until your next turn.

When all players have reached square 36, the player with the most money is the winner.

► **When You Have Finished**

Play the game again without using the calculator.

36	35	34	33	32	31
	\$1.50		\$2.10	\$1.40	
25	26	27	28	29	30
	\$2.90	\$1.50		\$3.00	
24	25	22	21	20	19
		\$3.20		\$1.50	
13	14	15	16	17	18
	\$1.20		\$2.50		
12	11	10	9	8	7
	\$4.10	\$1.10		\$1.50	
1	2	3	4	5	6
			\$3.80	\$1.20
