

You are the Professor's
Research Team and you have
been given the following clues.
Can you help sort this mess out?

*Where is the key and who is the
thief?*

Professor Sig Figs

He had to use his glasses to read the numbers.

Mr Jenkins is a vicar.

He hid the paper in a bible in the eight pew.

He wrote the bible page number in code as part of the puzzle.

The code used put the page number to 2 significant figures.

Mr Jenkins gave the professor a puzzle to find the key.

Arnold got a big tin of roses there where 57 in the tin, and it cost £5.30.

The professor could not round the key code to 3 decimal places so he used significant figures.

The professor liked puzzles.

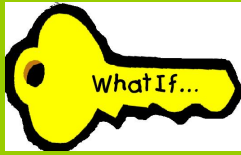

Arnold had an A-level in Maths.

The church had 10 rows of pews at each side.

Mrs Higgins took the wrong piece of paper.

The Key was last seen by the professor at his house?

Mrs Higgins took the key to the school?

Mrs Higgins saw someone behind her wearing glasses.

The CODE was 350

Mrs Higgins got a note through the professor's door.

The note said.....figure this one out smarty pants!
CROSS PEW FINGERS - 2
SIGNIFICANT FIGURES

Arnold rode his bike to the shop to buy them.

He charged the professor £6.00 saying that he had rounded the cost to the nearest pound.

The Professor told Arnold to get him some sweets to help him think.

The key was a number which the professor wrote on some paper.

Mr Jenkins found the paper on the floor of the school.

The paper had the number 0.000125.
